

# Notice of Allowability

Application No.

10/519,282

Examiner

VAN T. PHAM

Applicant(s)

KATO ET AL.

Art Unit

2627

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to 6/20/2006.
2. ☒ The allowed claim(s) is/are 1-7.
3. ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) ☒ All b) ☐ Some\* c) ☐ None of the:
    1. ☐ Certified copies of the priority documents have been received.
    2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    3. ☒ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

\* Certified copies not received: \_\_\_\_\_.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.

**THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.**

4. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
5. ☐ CORRECTED DRAWINGS ( as "replacement sheets") must be submitted.
  - (a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review ( PTO-948) attached
    - 1) ☐ hereto or 2) ☐ to Paper No./Mail Date \_\_\_\_\_.
  - (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date \_\_\_\_\_.Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

## Attachment(s)

1. ☐ Notice of References Cited (PTO-892)
2. ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3. ☐ Information Disclosure Statements (PTO-1449 or PTO/SB/08), Paper No./Mail Date \_\_\_\_\_
4. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material
5. ☐ Notice of Informal Patent Application (PTO-152)
6. ☐ Interview Summary (PTO-413), Paper No./Mail Date \_\_\_\_\_
7. ☐ Examiner's Amendment/Comment
8. ☒ Examiner's Statement of Reasons for Allowance
9. ☐ Other \_\_\_\_\_.

WAYNE YOUNG  
SUPERVISORY PATENT EXAMINER

***Response to Arguments***

1. Applicant's arguments, see Remarks, filed 6/20/2006, with respect to claims 1-7 have been fully considered and are persuasive. The rejection of 112 first has been withdrawn.

***Drawings***

2. The drawings were received on 6/20/2006. These drawings are acceptable.

***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance:

Takeda, see Figs. 9-14, discloses a method for determining a power of a laser beam which is adapted for determining a recording power of the laser beam to be projected onto a data rewritable type optical recording medium for recording data therein, which comprises the steps of: recording a first test signal in the data rewritable type optical recording medium while varying a level of the recording power of the laser beam (see [0028] and [0072]) measuring, for each of the levels of the recording power of the laser beam, an amplitude A0 of a reproduced signal obtained by reproducing the first test signal before the first test signal is influenced by cross erasing of data, an amplitude A1 and jitter J1 of a reproduced signal obtained by reproducing the first test signal after the first test signal was once influenced by cross erasing of data and an amplitude A10 and jitter J10 of a reproduced signal obtained by reproducing the first test signal after an influence of cross erasing of data on the first test signal was saturated (see Figs. 10-13); calculating a first parameter for each of the levels of the recording power as a function of a difference between the amplitude of the reproduced signal obtained reproducing the first test signal before the first test signal is influenced by cross erasing of data and the

amplitude of the reproduced signal obtained by reproducing the first test signal after the first test signal was once influenced by cross erasing of data (see [0066], abstract and Figs.1-14);

None of the cited references disclose or suggest a method for determining a power of a laser beam which is adapted for determining a recording power of the laser beam to be projected onto a data rewritable type optical recording medium for recording data therein, which comprises the steps of: recording a first test signal in the data rewritable type optical recording medium while varying a level of the recording power of the laser beam; measuring, for each of the levels of the recording power of the laser beam; calculating a first parameter for each of the levels of the recording power as a function of a difference between the amplitude of the reproduced signal obtained reproducing the first test signal before the first test signal is influenced by cross erasing of data and the amplitude of the reproduced signal obtained by reproducing the first test signal after the first test signal was once influenced by cross erasing of data; calculating a second parameter for each of the levels of the recording power as a function of a difference between the amplitude  $A_1$  of the reproduced signal obtained by reproducing the first test signal after the first test signal was once influenced by cross erasing of data and the amplitude  $A_{10}$  of the reproduced signal obtained by reproducing the first test signal after the influence of cross erasing of data on the first test signal was saturated; calculating a third parameter as a function of a difference between jitter  $J_{10}$  of the reproduced signal obtained by reproducing the first test signal after the influence of cross erasing of data on the first test signal was saturated and jitter  $J_1$  of the reproduced signal obtained by reproducing the first test signal after the first test signal was once influenced by cross erasing of data; obtaining a value of the first parameter corresponding to a value of the second parameter when the third parameter is

equal to a tolerance, thereby determining a critical parameter; recording a second test signal in the data rewritable type optical recording medium while varying a level of the recording power of the laser beam; judging whether or not signal characteristics of a reproduced signal obtained by reproducing the second test signal recorded in the data rewritable type optical recording medium satisfy reference conditions; measuring, for each of the levels of the recording power of the laser beam, when the signal characteristics of the reproduced signal obtained by reproducing the second test signal recorded in the data rewritable type optical recording medium satisfy the reference conditions, an amplitude D3 of the reproduced signal obtained by reproducing the second test signal before the second test signal is influenced by cross erasing of data and an amplitude D2 of the reproduced signal obtained by reproducing the second test signal after the first test signal was once influenced by cross erasing of data; calculating a fourth parameter based on the amplitudes D3 and D2 of the reproduced signals obtained by reproducing the second test signals as a function of a difference between the amplitude D3 of the reproduced signal obtained by reproducing the second test signal before the second test signal is influenced by cross erasing of data and the amplitude D2 of the reproduced signal obtained by reproducing the second test signal after the first test signal was once influenced by cross erasing of data, comparing the critical parameter and the fourth parameter; and determining the recording power of the laser beam at which the fourth parameter was obtained as an optimum recording power when the fourth parameter is equal to or lower than the critical parameter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

Art Unit: 2627

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
